

A3 REPORT PRESENTATION

10/12/2024

Course Code: ENL2101_300

Course Name: Applied Professional Communication

Instructor's Name: Dr. Donald Moen

Presented By:
Vanshika Saran Sharma

OVERVIEW

- Background
- Problem Statement
- Goal Statement
- Root Cause Analysis
- Countermeasures
- Countermeasure Implementation Plan
- Evaluating Results and Process
- Follow-up Actions
- Appendix
 - References

BACKGROUND

Many university students in Ottawa, rely on **public transport**, mainly buses to go to college. Lately, there have been **delays and cancellations** of the buses which causes students to **arrive late** to the classes or **miss it**. Specially for the students living on off-campus accommodations far from college, this is a challenge.

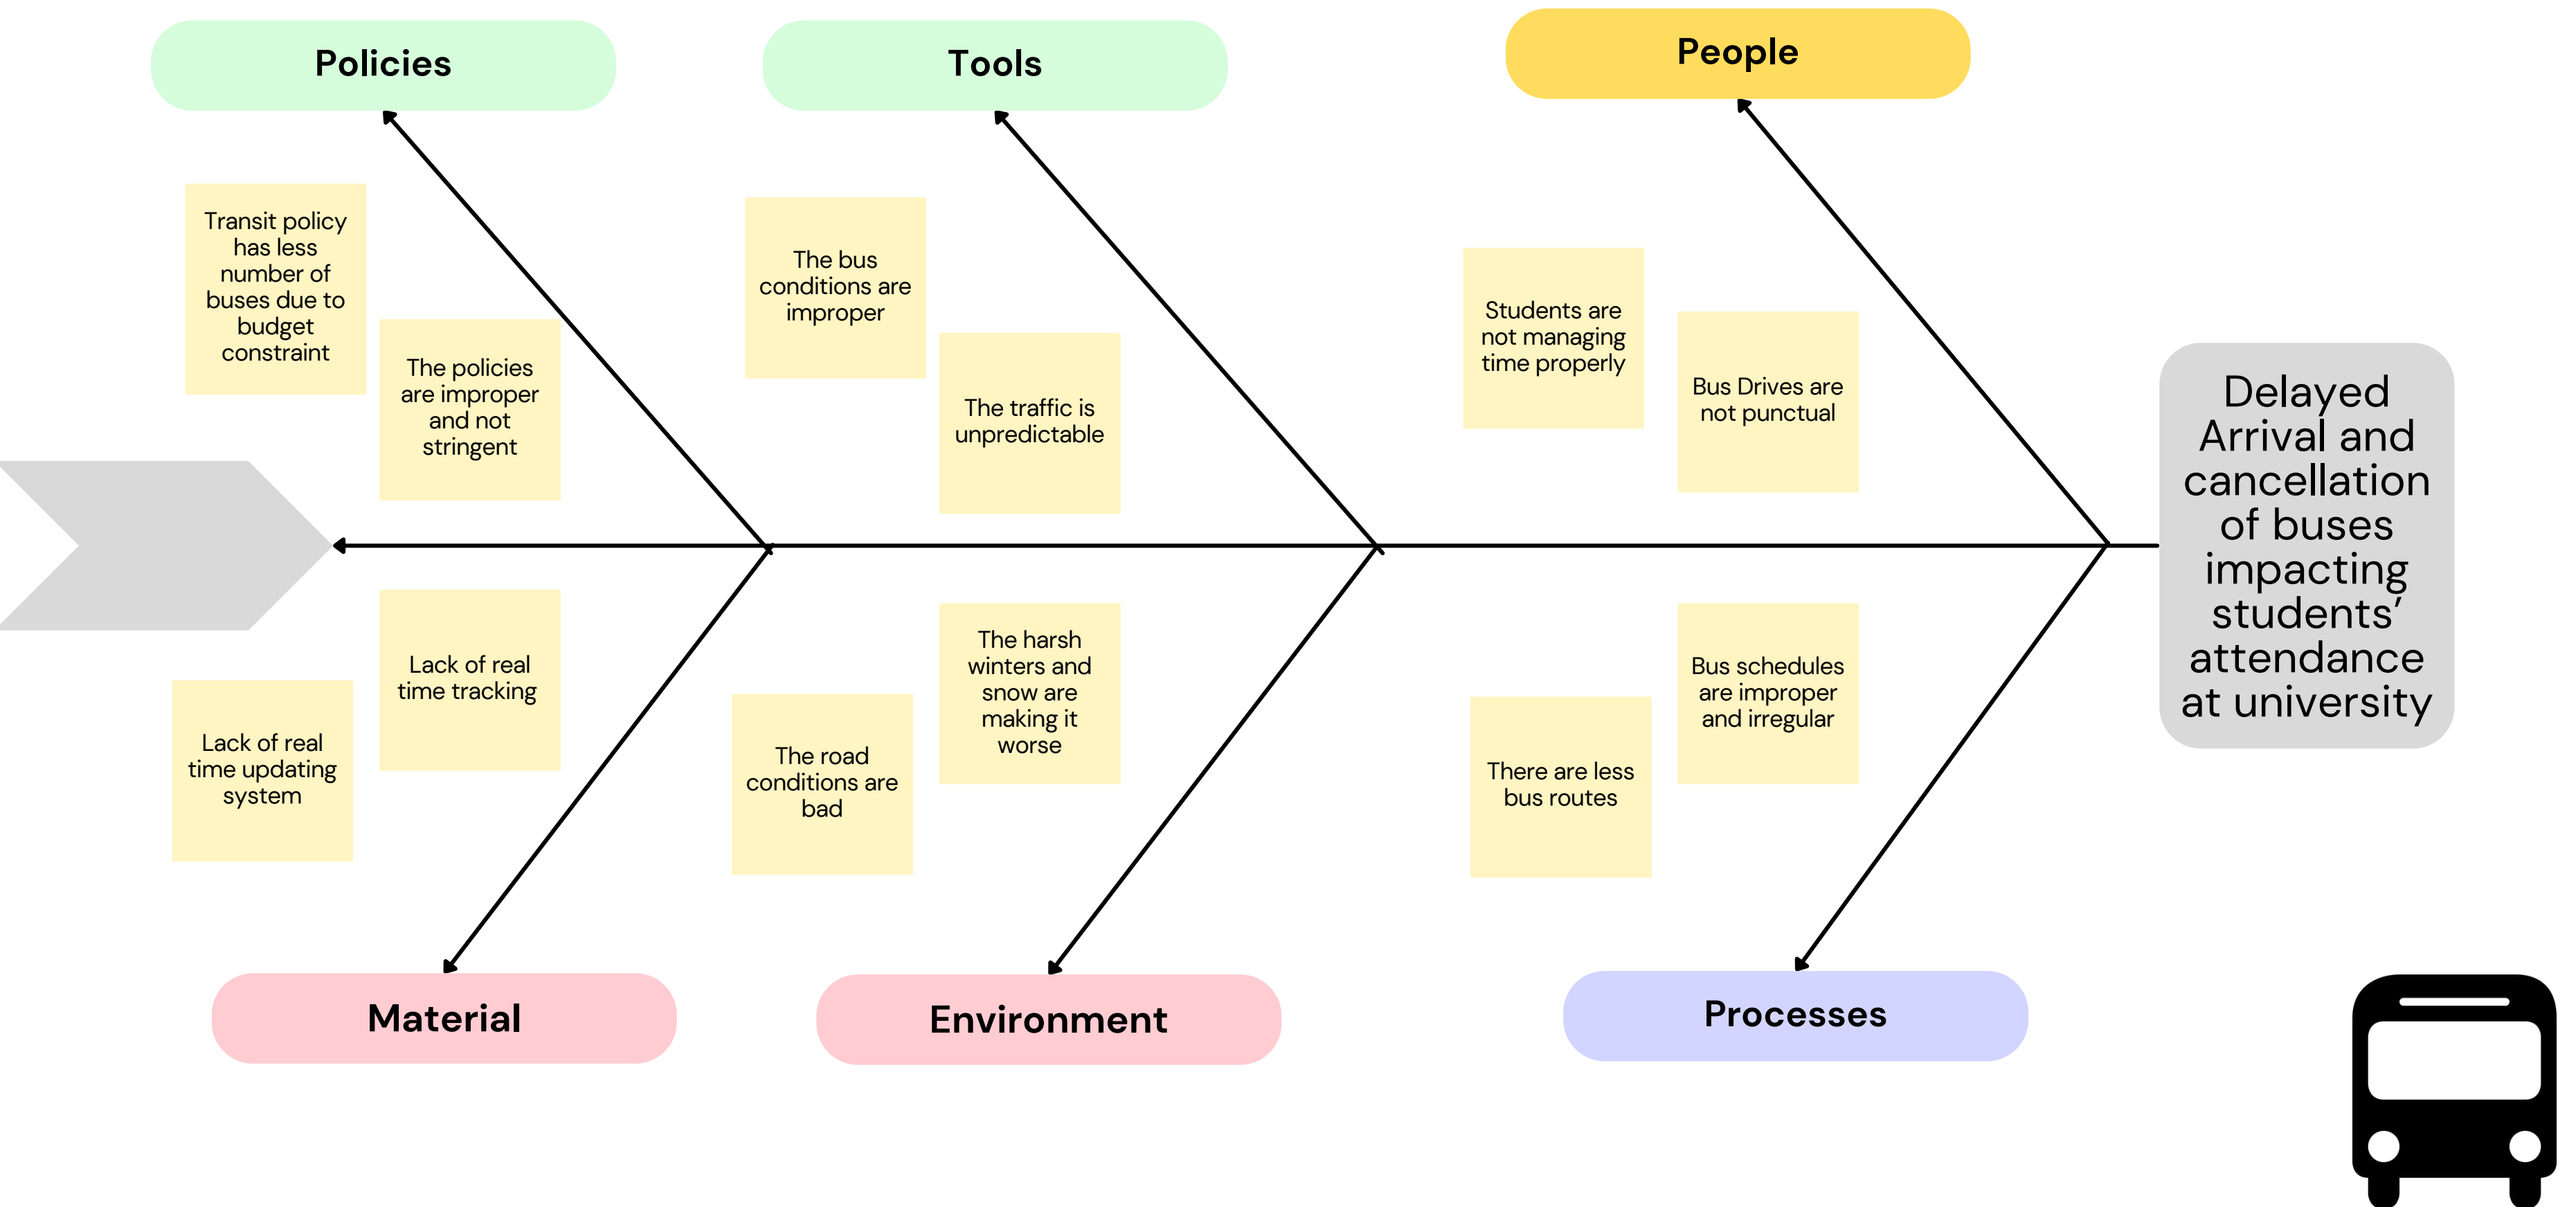

STATEMENT OF THE PROBLEM

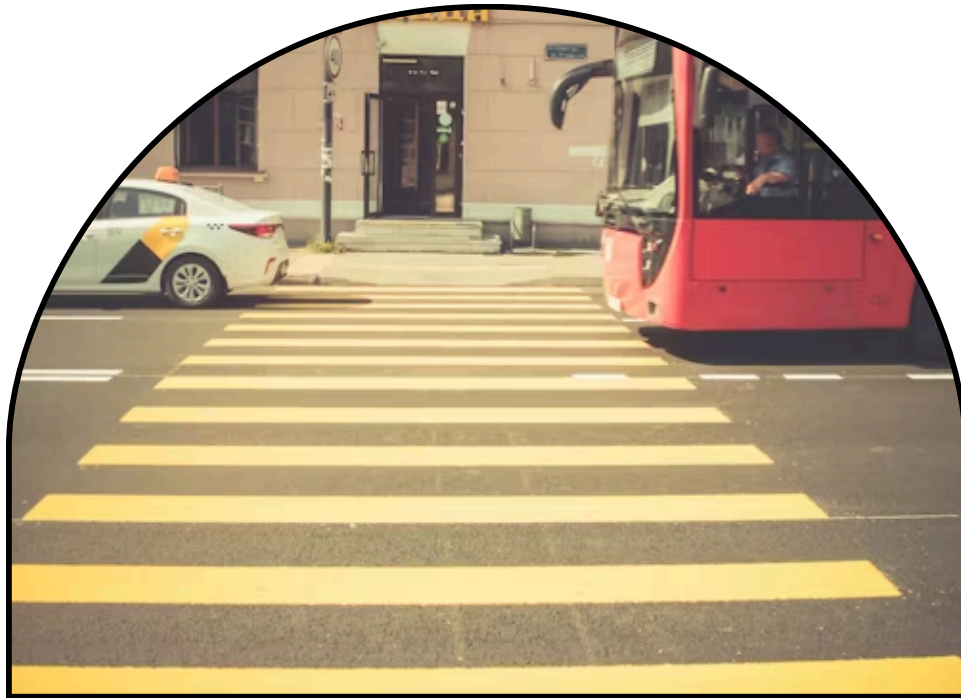

Delayed arrival and cancellation of buses impact students' attendance at the university.

A process mapping exercise was undertaken, a variety of shortcomings were identified and agreed upon. The shortcomings are highlighted in the fishbone analysis diagram on the next page.

ROOT CAUSE ANALYSIS

Unpredictable, ever-changing, and varied bus schedules.

Lack of live updates/status of the bus schedule, delays and cancellations.

Improper time management from the students' end

COUNTERMEASURES

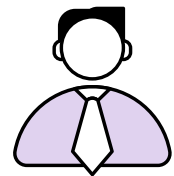

*Increasing the number of buses
going towards the university
(route to university).*

*Write significant findings
Better scheduling to align with
the common timetable of
classes at the university.*

*Real-time bus tracking option
enablement and live
notification on any changes to
the bus schedule.*

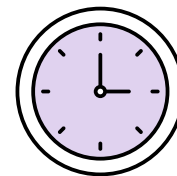

COUNTERMEASURE IMPLEMENTATION PLAN

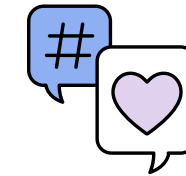

Increasing the number of buses going towards the university (route to university)

- Talk to the key authorities and highlight troubles
- Implement a policy to increase the number of buses during the peak hours and weekdays
- Plan a pilot program to check the affects

Better scheduling to align with the common timetable of classes at the university

- Collaboration between the university and transportation authorities to come up with a plan to match the timetable of classes and buses arrival timelines to the university

Real-time bus tracking option enablement and live notification on any changes to the bus schedule

- Develop and implement a pilot program to give students access to live tracking of buses with the help of IT department at the university and transit authority.

EVALUATING RESULT & PROCESS

Student feedback	Gather student feedback through surveys and get their opinions on revised bus schedule and tracking systems
Track metrics	Track metrics by collecting information around the punctuality of the students to the class and the bus schedules,
Collect quantative data	Collect data around implantation of the pilot programs and their success and if everything stayed on track

FOLLOW-UP ACTIONS

Constant tracking of the bus schedule punctuality and its effect on the students post implementation.

Tracking and monitoring continuously in order to make any needed adjustments to the bus schedules or live updates/notification systems.

***THANK
YOU!***

Thank you for listening!
